Product Overview
Hotel & Hospitality

Snom telephones for the hotel and hospitality industry

Snom telephones have long been used in the hotel and catering industry. However, especially in the area of room equipment, our devices were only ever of interest to a very high-end hotel class and were not really suitable as their range of functions was simply too extensive.

Nevertheless, the hotel and catering sector is very appealing to our value added reseller partners. However, due to the quantities required, this sector is extremely price-sensitive with its own rules and requirements.

Thanks to the expertise of our parent company, Vtech, in this industry, we have been working intensively on this topic and are pleased to be able to present our IP solutions specifically for this sector on the following pages.

IP room telephones

Whether it's used as a stylish accessory or a practical device – a room telephone must meet different requirements from a classic business device with which we've built our reputation.

From speed dial keys for the most important functions, such as reception, room service or SPA, to quick and easy personalisation, using printed labels or the need for daily cleaning, the hospitality industry has different requirements to the standard business device.*

Analogue solutions

There are still many analogue installations in the hotel sector in particular, especially in guest rooms. In many cases, it is only worthwhile converting these to IP at great expense when a large scale renovation is due. Snom therefore also offers an analogue telephone series for these special cases. Outwardly nearly indistinguishable from our IP-based end devices, they offer an ideal and elegant solution for every guest room.

Back office and reception

In a reception area, clarity is the key to success. Reception staff should always be able to recognise at a glance what type of call is coming in: external, internal from the back office or from one of the rooms. The requirements and approach differ depending on the origin. This means that a large display, possibly with a corresponding extension, is a must have*. The same applies to work in the back office - here the device used should meet all the requirements of a modern office.
